

Health Coach Application System

Software Requirements & Implementation Overview

Health Coach Application System

Software Requirements &
Implementation Overview

Problem Statement

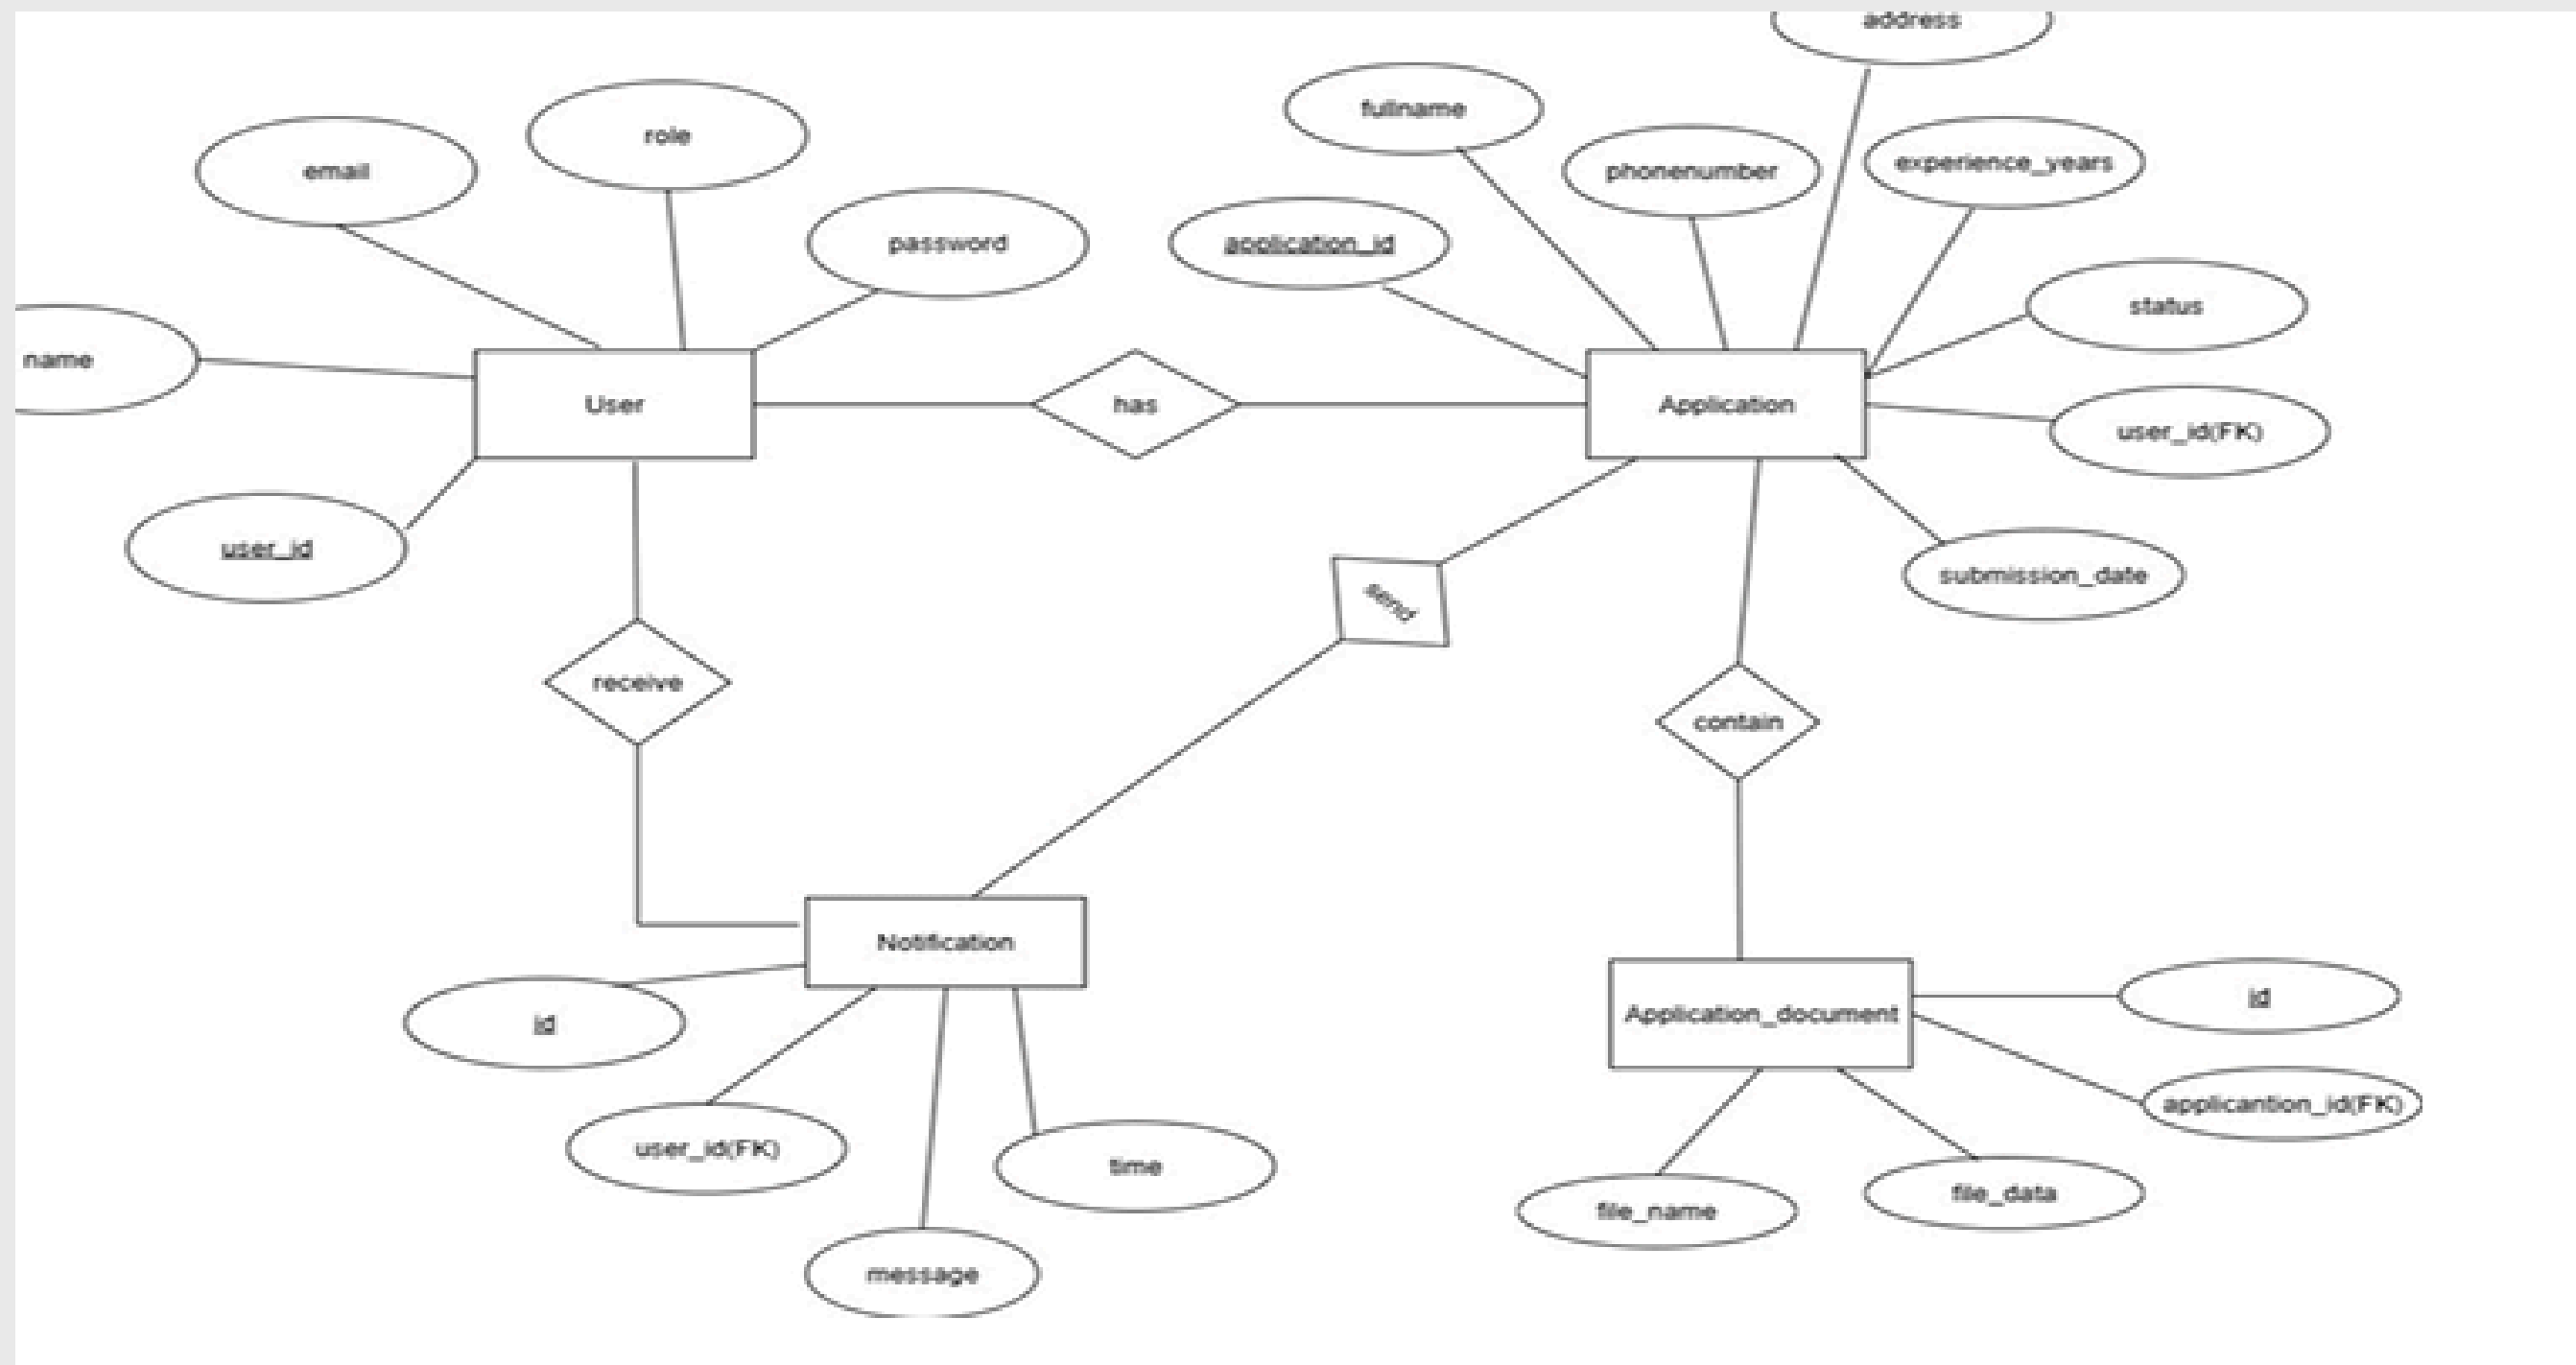

- - Manual application process is time-consuming
- - No centralized platform for applicants, reviewers, and admins
- - Poor transparency and delays in responses
- - High administrative overhead without analytics

Proposed Solution

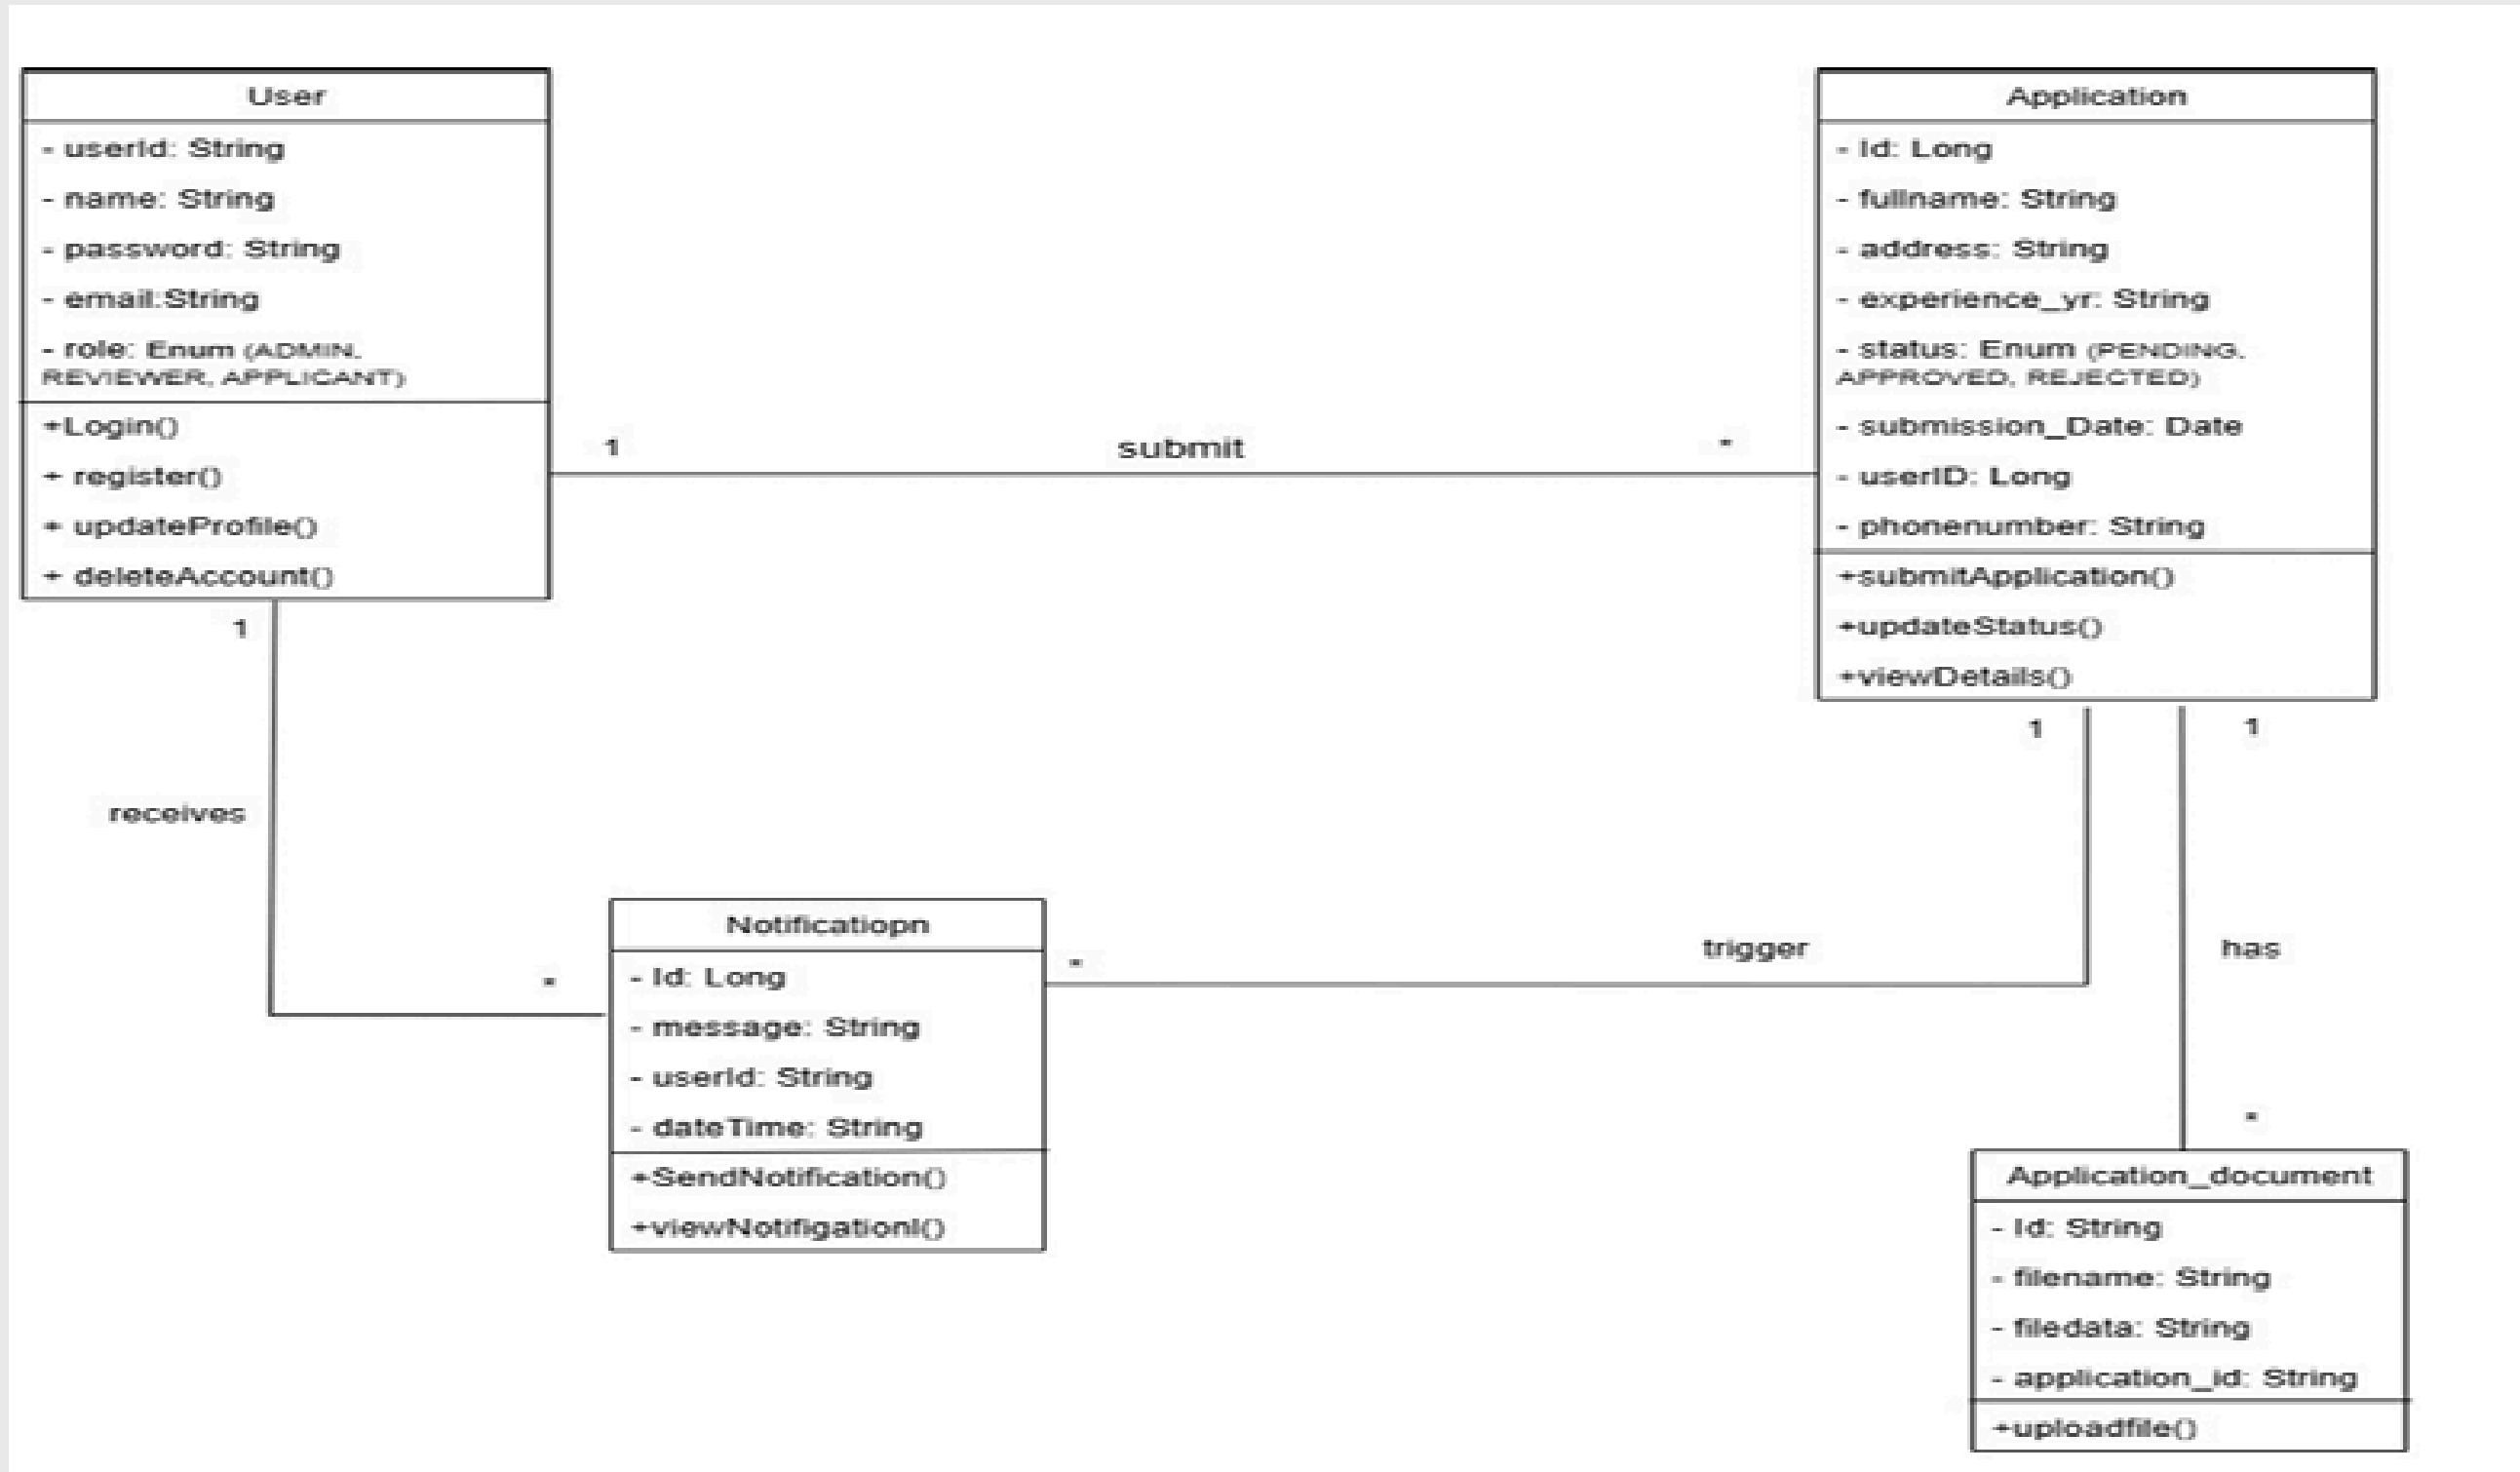

- - Centralized web-based system for application management
- - Applicant Registration & Submission
- - Reviewer Dashboard (approve/reject)
- - Status Tracking & Notifications
- - Reporting & Analytics for Admin
- - Built on React.js, Spring Boot, MySQL

Class Diagram

Sequence Diagram

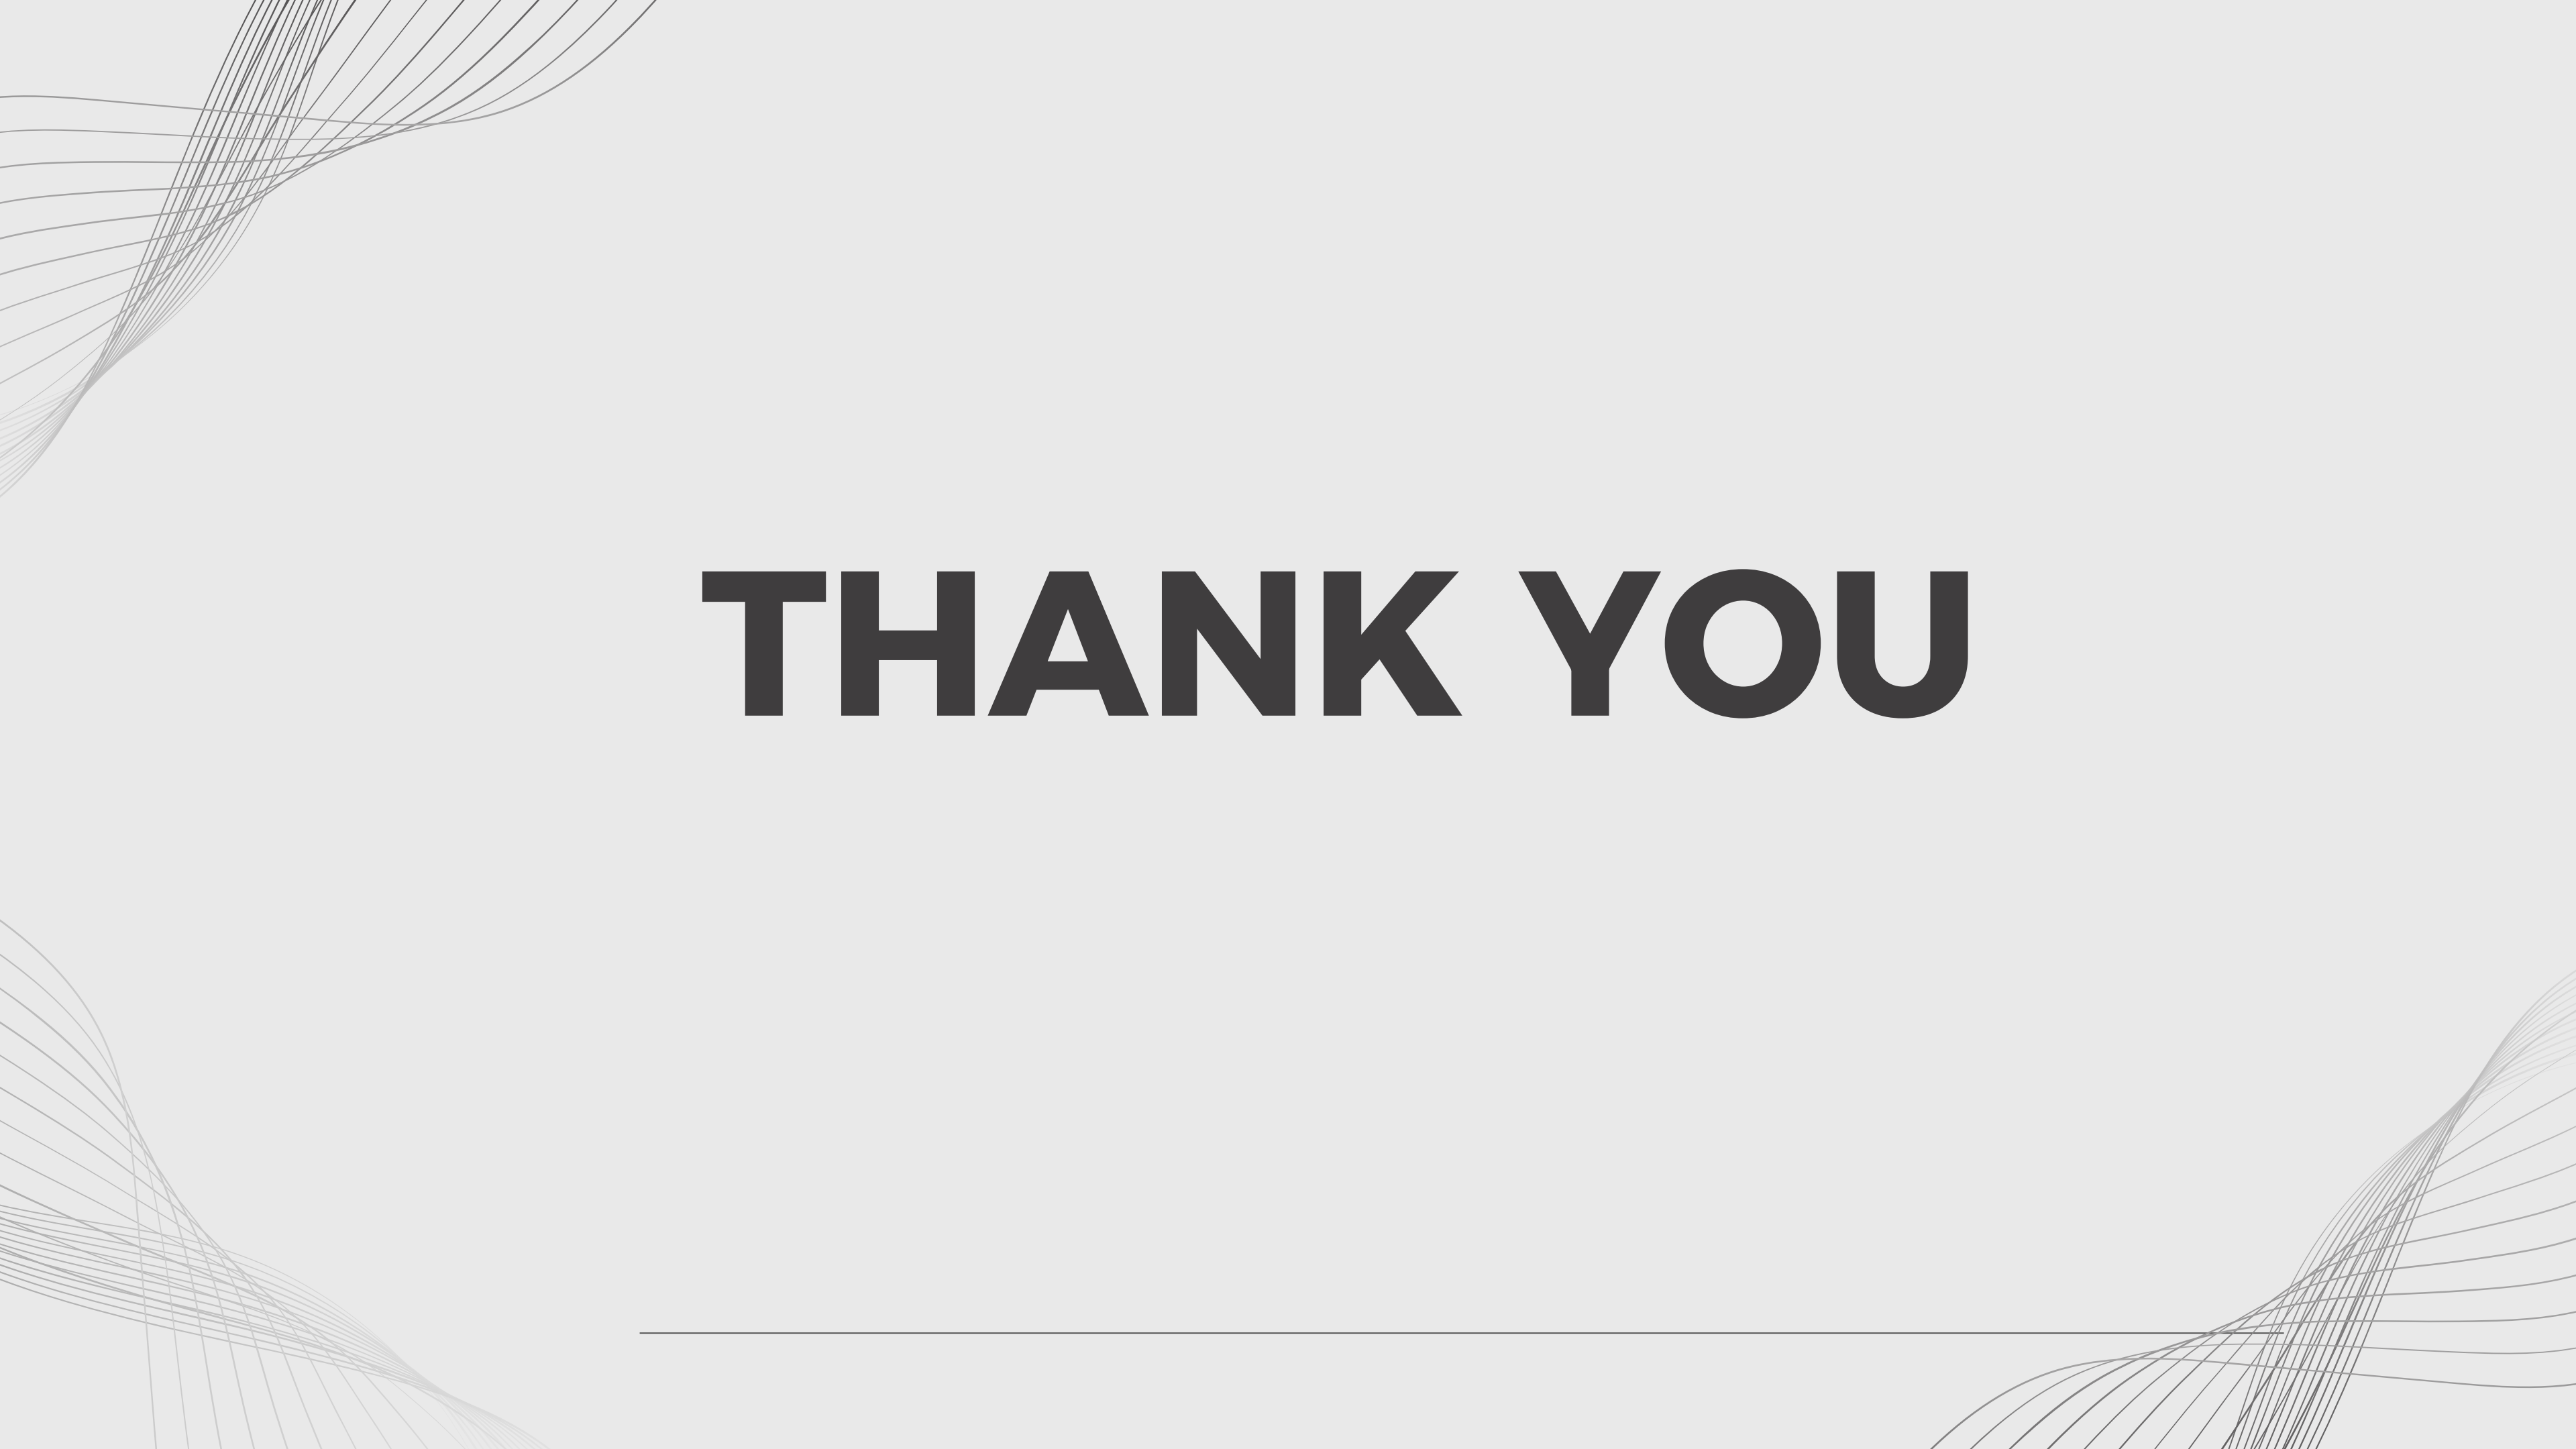

Project Implementation

- - Frontend: React.js + Tailwind CSS
 - - Backend: Spring Boot (Java, REST API)
 - - Database: MySQL 8.x
 - - Security: JWT + RBAC
 - - Deployment: Cloud/Docker
-
- Screenshots: Login, Application Form, Reviewer Dashboard, Admin Panel

Enhancements & Conclusion

- Future Enhancements:
 - - Automated credential verification
 - - Payment Gateway
 - - Background checks & In-app messaging
 - Conclusion:
 - - Reduces admin effort
 - - Improves transparency
 - - Enhances applicant experience
-

THANK YOU
